COMPLETING THE FACILITY CONSUMPTION DATA REPORT AND REQUEST FOR ANTI-TUBERCULOSIS, PROPHYLAXIS, ANTI-LEPROSY MEDICINES and NUTRITION COMMODITIES

This is a data capture tool for aggregating, reporting and ordering of anti- TB, prophylaxis, anti-Leprosy medicines and nutrition commodities for the health facility. This tool is filled by the health care worker at the point where TB commodities are reconciled.

1. When to fill:

At the end of every month The reporting period is the most recent full calendar month (from first day to last day of the month) for which the information is being reported.

2. To be filled on each report:

Facility name: Name of your health facility where the commodities are dispensed.

Facility type: Fill the type of facility as dispensary (DISP), health centre (HC), Sub County Hospital (SCH), County Referral Hospital (CRH) or National Referral Hospital (NRH).

Sub County: Fill the Sub County where the facility is located.

County: County where the facility is located.

Sector: Indicate by ticking in the appropriate box whether Public, FBO, Prisons or Private

Beginning Date (of reporting period): Fill in the first date of the month (in the format dd-mm-yyyy)

Ending Date (of reporting period): Fill in the last date of the month (in the format dd-mm-yyyy)

Commodity/Unit: The commodity and its unit are pre-printed on the report. The commodities are divided into six sections i.e. TB commodities, prophylaxis, Leprosy medicines, DRTB, nutrition commodities and ancillary medicines.

Beginning Balance at the start of the Month (A): Enter the total Quantity (as per the defined unit) of each usable commodity at hand in the facility on the last day of the previous month. The Beginning balance should be equal to the Physical count at the end of the previous month. If it is not, indicate the loss or adjustment in the respective columns of this F-CDRR and explain in the Comments section.

Received this month (B): Enter the Total Quantity (as per the defined unit) of each commodity received by your health facility from an external supplier (e.g. KEMSA) within the month. If no stock was received at the facility during the period, enter a zero ("0") in this column.

The quantities of each commodity received by the facility can be found in the Quantity Received column of the Bin card.

Do NOT include quantities issued from the Bulk/ Drug store to the dispensing area.

Quantity Dispensed (C): Record the total Quantity dispensed to the patients / clients within the month. If no quantities of a commodity were dispensed to clients / patients during the month, enter

"o" in the Quantity dispensed column for that commodity.

Do NOT write the quantities that were issued to the Dispensing area from the Bulk or Drug Store.

The total quantities of each commodity dispensed to clients/patients are recorded in the **Total Quantity Dispensed** row of the DADR.

If several pages of the DADR have been used over the month, aggregate the figures in this Total Quantity Dispensed row across all the pages used that month for each commodity.

Positive Adjustments (D): Enter the quantity of positive adjustment (in the defined unit) to the stock balance of the commodity. The reason for the positive adjustment should be written in the "Comments" section.

A positive **adjustment** refers to stocks of commodities your facility received from other health facilities within the month.

Negative Adjustment (E): A negative adjustment refers to stocks of commodities you issued from your facility to other health facilities within the month. The reason for the negative adjustment should be written in the "Comments" section.

Adjustments should be recorded in the Bin card when they occur.

Note: Excess quantities counted when stock-taking are also a positive adjustment while quantities of stock found to be missing when stock-taking are indicated as a negative adjustment.

Losses (F): Enter the quantity (in the defined unit) of any loss of stock of the commodity at the facility. Losses include defective, damaged or expired drugs and should be separated from the usable stock. In the Comments section, indicate the actual number of units lost and explain the reason for the loss.

Any missing commodity unaccounted for should be documented and suspected theft investigated according to the government's policy.

Ending Balance (G): This is the stock at the end of the period as reflected on the stock card. It is calculated as indicated in the formula below:

$$G = (A + B + D) - (C + E + F)$$

Physical Count (H): Enter the total sum (in the defined unit) of usable commodity counted physically in the facility. This should be done at the close of business on the last day of the reporting period and should include quantities from **all the dispensing points** in the facility. **Note:** The Physical count for each commodity should be equal to the Expected Ending Balance obtained by the calculation above:

Write the Physical count and report any differences between the Physical count and the expected Ending balance from the calculation as Adjustments or Losses. The reason for the adjustments or losses should be written in the "Comments" section.

Earliest Expiry Date (6 months): During the physical count, note and record for each commodity, the Quantity that will expire in **less than six months**, and write the expiry date (in the format mm/yyyy). Should there be several short expiry batches, record the dates of each.

Quantity Needed (I): Write the Quantity (in the defined unit) of each commodity required for re-supply for patients. This is determined as follows:

Quantity required for re-supply (I) = (C \times 3) - G i.e. multiply the reporting period's consumption by 3, and then subtract the Physical count.

Reporting and Ordering tools: Indicate the tools required by type (DADR, F-CDRR) and quantity. For DADR, indicate the size of the book required in number of pages.

Patient Summaries: Indicate the number of patients every month by the following categories: New, Retreatment, Leprosy, DRTB, TPT, disaggregated as Adults and Pediatrics.

Supply Box Commodities: For RHZE and RH tablets, indicate beginning balances, amount into and out of the supply boxes and ending balances.

Comments: Enter data on pharmaceutical care and impact if any. Give any information on Pharmacovigilance, Give any supply chain and commodities security explanations for the information provided in the report.

Compiled by: The person responsible for preparing this report should write their full Name, Designation, Contact telephone, Date of signing and Signature
